Predict accurately with four steps

Improves care

Extract information to predict

Reduce the risk of life

Reduce cost for surgical treatment

Input attributes can be taken

Diagnosed with heart disease

Input values from parents health report

Data mining holds the potential

Analyze data set

Test and train dataset

Models get trained using data

Design and implement system

Exploratory data analysis

Detection System

Not efficient to calculate

Symptoms gets reduced

Functioning gets improved

Effectively predicts heart disease

Effective the combination of feature changes

Knowledge not data model in the data set

Data mining holds promise in healthcare

Predict with four attributes and fast

Processes an estimated disease prediction system
